Instructions

- 1. You can now order your labs and BYPASS insurance – especially if your co-pay is high, you have a high deductible, or you have no insurance at all. Labs can be quite expensive if you go to Quest or Labcorp and have to pay out of pocket.**
- 2. You can order your labs through patient portal – look for either Female or Male Initial Panel or the Follow-Up, whichever applies. You can also send me an e-mail asking me to load that item into your cart.**
- 3. Once you place your order – a lab kit will be shipped to you.**
- 4. If you choose to go to a draw site, the company will use your zip code to find the nearest blood draw station, the draw fee ranges from \$25-\$60 depending on the location (you would pay the place you get labs done that fee). Bring the kit to the blood draw site and they will do everything from there including shipping the specimen for the patient.**
- 5. For mobile phlebotomy, ExamOne will call you and set a time to come to your house or office, this is a \$75 fee no matter location. You would pay the technician who comes to draw your bloodwork that fee.**
- 6. As soon as labs come back – We will send you your results via the secure server and you can follow instructions in the e-mail that comes with it.**
